

## Children's Family Structure in California

### Households with Children Ages 0-17: 2016-2020

| Locations             | Percent |
|-----------------------|---------|
| United States         | 30.7%   |
| California            | 34.0%   |
| Alameda County        | 33.2%   |
| Contra Costa County   | 35.7%   |
| Fresno County         | 40.7%   |
| Kern County           | 42.6%   |
| Los Angeles County    | 32.4%   |
| Orange County         | 34.1%   |
| Riverside County      | 37.4%   |
| Sacramento County     | 34.3%   |
| San Bernardino County | 41.5%   |
| San Diego County      | 32.5%   |
| Santa Clara County    | 35.8%   |

**Definition:** Estimated percentage of households with and without one or more children ages 0-17 (e.g., in 2016-2020, 34% of California households had children).  
**Data Source:** U.S. Census Bureau, [American Community Survey](#) (Aug. 2022).

### Children in Two-Parent Households, by Race/Ethnicity: 2018-2019

**Definition:** Estimated percentage of children ages 0-17 living in households with and without parents present, by child's race/ethnicity (e.g., in 2018-2019, 70.4% of Hispanic/Latino children in California were in living arrangements with two parents present).

**Data Source:** Population Reference Bureau, analysis of U.S. Census Bureau [Current Population Survey Annual Social and Economic Supplement](#) public use microdata (Jan. 2020).

### What It Is

On kidsdata.org, measures of children's family and household structure come from the [American Community Survey](#) and [Current Population Survey](#). Depending on the measure, data are provided as one-, two-, and/or five-year estimates for the nation, state, counties, cities, school districts, and/or legislative districts. The following indicators are available:

- [Households with children ages 0-17](#)
- Children living with parents or other relatives [overall](#) and [by race/ethnicity](#)
- [Children in cohabitating couple households](#)
- [Children in same-sex couple households](#)
- [Children in the care of grandparents](#)

In addition, kidsdata.org's measures of youth housing situation present characteristics of where and with whom students in grades 7, 9, 11, and non-traditional programs live. These estimates come from the [California Healthy Kids Survey](#) and are based on youth self-reports by [grade level](#), [gender](#), [level of school connectedness](#), [parent education level](#), [race/ethnicity](#), and [sexual orientation](#).

### Why This Topic Is Important

Child well being is influenced strongly by the family environment and the presence of caring adults. Children can thrive in any type of family—e.g., in the care of grandparents, single parents, same-sex parents, etc.—more important than family structure are factors related to family stability and strong, secure relationships with primary caregivers. Research shows that unstable home environments and parental relationships can adversely affect children's health and functioning. Financial stability is important, too, and is linked to family structure. For example, single parents are more likely than married or cohabitating parents to experience financial difficulty, housing instability, and food insecurity. Financial hardship can cause family stress and hinder a family's ability to provide the environment and experiences a child needs for optimal cognitive, emotional, and physical development.

Other factors related to children's home environments can put them at risk for negative health outcomes. For example, youth living in multi-family (overcrowded) homes, in hotels/motels, or with friends may be homeless

## Children in Cohabiting Couple Households

**Definition:** Estimated percentage of children ages 0-17 living in households in which the householder resides with their unmarried partner (e.g., in 2019, 8.8% of California children lived in cohabiting couple households).

**Data Source:** Population Reference Bureau, analysis of U.S. Census Bureau [American Community Survey](#) summary files and public use microdata (Oct. 2020).

## Youth Housing Situation, by Grade Level: 2017-2019

| California Housing Situation | Percent |         |          |
|------------------------------|---------|---------|----------|
|                              | Grade 7 | Grade 9 | Grade 11 |
| Parent's or Guardian's Home  | 85.8%   | 91.0%   | 92.0%    |
| Other Relative's Home        | 2.4%    | 1.9%    | 1.9%     |
| Friend's Home                | 0.3%    | 0.2%    | 0.3%     |
| Multi-Family Home            | 6.0%    | 3.7%    | 3.5%     |
| Foster or Group Home         | 0.3%    | 0.3%    | 0.4%     |
| Hotel or Motel               | 0.2%    | 0.1%    | 0.2%     |

**Definition:** Housing situation among public school students in grades 7, 9, 11, and non-traditional programs (e.g., in 2017-2019, an estimated 6% of California 7th graders lived in multi-family homes).

**Data Source:** WestEd, [California Healthy Kids Survey \(CHKS\)](#) & [Biennial State CHKS](#). California Dept. of Education (Aug. 2020).

or at risk of homelessness. Poverty and housing insecurity can impact young people's development and well-being throughout life. Additionally, youth living in foster care or group homes are a particularly vulnerable population, facing increased risks for emotional, physical, and behavioral health problems.

## How Children Are Faring

The share of California households with children ages 0-17 was 34% in 2016-2020, down from 38% a decade earlier in 2006-2010. State estimates over this period followed national trends but were consistently higher than U.S. figures. In 2016-2020, 9% of California children in households lived with unmarried couples (of the same or opposite sex), 0.5% lived with same-sex couples (married or unmarried), and 3% lived with grandparents. Across counties with data, estimates of children in cohabiting couple households ranged from 4% to 15%, children in same-sex couple households from 0.2% to 1.1%, and children in the care of grandparents from 1% to 10%.

Statewide, 64% of children in households lived with two parents in 2018, 24% lived with their mother only, 8% with their father only, and 4% with non-parent relatives. Like other measures of family structure, these estimates vary widely by region and demographic group. For example, the percentage of children living with two parents ranged from 54% (Mendocino) to 77% (Placer) across California counties with data for 2014-2018, and, at the state and national level, from fewer than 45% (African American/black) to more than 80% (Asian/Pacific Islander) among racial/ethnic groups with data for 2018-2019.

According to a survey of California youth, more than 85% of students in grades 7, 9, and 11 lived in a home with one or more parents or guardians in 2017-2019. During the same period, fewer than 1 in 15 lived in a home with more than one family, and fewer than 1 in 40 lived in the home of another relative. Students in non-traditional programs, those with low levels of school connectedness, and those whose parents did not finish high school are less likely to live in a parent's or guardian's home than their peers in other groups.
